

Fade Out Thinner

DESCRIPTION

C.A.R. Fit Fade out thinner is a special mixture of solvents (fade-out thinner) to “melt” edges of spot repairs and fade-out areas.

C.A.R. Fit Fade out thinner can also be used to dissolve old paintworks (Attention: test suitability to avoid unwanted wrinkling/raising of old paintwork) in order to improve the adhesion of the subsequent coating. In this case, C.A.R. Fit Fade out thinner must be applied uniformly on the old paintwork and recoated within a few minutes.

Spray immediately C.A.R. Fit Fade out thinner over the border areas (overspray areas). Melt the overspray edges with a very uniform coat of C.A.R. Fit Fade out thinner until the rough overspray becomes visibly smooth.

Do not apply too much as it may dissolve irregular.
